

Cyber Security Awareness

The Cyber Security Awareness training provides a good general picture of what cybercrime entails, how you can get involved and most importantly: how to make a difference in the fight against cybercrime.

The cyber security risks that individuals and organizations face are generally greater than expected. The media reports on large hacks almost weekly, and the damage caused by these cyber attacks amounts to more than 500 billion euros annually worldwide. In addition to technical measures, such as virus scanners and firewalls, cyber security depends mainly on the employees themselves. This course helps to strengthen the so-called 'human firewall'.

Target audience

A Cyber Security Awareness course is a must for all employees. Whether you are dealing with confidential information or not, we all face the risk of being victimized by phishing mails or WhatsApp fraud.

No specific prior knowledge is required for this course.

Objective

The key question of this e-learning is: how do I prevent becoming a victim of cybercrime? Once you have completed this e-learning, you will be better armed against cybercrime. You will be able to describe different types of cybercrime and will know how to recognize cybercrime via e-mail, WhatsApp or text.

What our participants say

"The Cyber Security training was very interesting. The links, examples and videos made the theory very diverse. The different examples of possible attacks on personal data and files were especially interesting."

"Useful training, good way to refresh your memory and become extra wary of cybercrime. Some of the examples were definitely eye-openers!"
